EUGENICS BOARD OF NORTH CAROLINA

ELLEN WINSTON, PH.D., Commissioner of Public Welfare,
Chairman

HARRY McMULLAN, Attorney General of North Carolina

J. W. R. NORTON, M.D., State Health Officer

DAVID A. YOUNG, M.D., Acting Superintendent, State Hos-
pital, Raleigh

IRA LONG, M.D., Superintendent, State Hospital, Goldsboro

ETHEL SPEAS, *Executive Secretary*

LETTER OF TRANSMITTAL

*To his Excellency, WILLIAM B. UMSTEAD,
Governor of North Carolina.*

Dear Sir:

I have the honor of submitting herewith the report of the Eugenics Board of North Carolina for the biennial period dating from July 1, 1952 through June 30, 1954.

Sincerely yours,

Ellen Winston
Chairman

INTRODUCTION

North Carolina's present sterilization law was passed by the General Assembly of 1933.

The law provides specifically for the sterilization of three types of cases upon authorization of the Eugenics Board: "(1) the feebleminded, (2) the epileptic, and (3) the mentally diseased."

These persons may be sterilized when it is believed that:

- (1) An operation would be for the best interest of the person concerned;
- (2) An operation would be for the public good; or when
- (3) A child or children might be born who would have a tendency to serious mental or nervous disease or deficiency.

The heads of state institutions and county superintendents of public welfare are designated by law to institute sterilization proceedings by filing petitions with the Eugenics Board.

The 1933 statute provides for both hearing and right of appeal.

The members of the Eugenics Board, specified in the law, assure careful consideration of each petition from the social, physical, psychological, psychiatric, and legal viewpoint. The members are: The Commissioner of Public Welfare, the secretary of the State Board of Health, the chief medical officer of an institution for the "feebleminded" or mentally ill of the State of North Carolina not located in Raleigh, the chief medical officer of the State Hospital at Raleigh, and the Attorney General of North Carolina.

The experience of the Eugenics Board over a period of 25 years has led to the conclusion that the sterilization program should be based on education and on careful study of each case. Not only is great responsibility vested in the Board itself, but the successful administration of the program depends largely on the petitioners and their staffs. They are the ones who help the individuals considered for sterilization and their families to understand the meaning of sterilization so that they will consent voluntarily to the operation.

DEVELOPMENTS DURING THE BIENNIMUM

The Eugenics Board has held regular meetings on the fourth Wednesday in each month during the biennium ending June 30, 1954. In addition to the regular meetings, eleven special meetings have been held at the request of petitioners to act upon emergency cases.

The Eugenics Board recognizes that the sterilization program of the state calls for the joint efforts of the state institutions, welfare, and health departments together with the close cooperation of private physicians, nurses, and voluntary agencies. It also calls for a well informed citizenry as related to the meaning of sterilization and the need for certain individuals to have the protection of the operation. With this in mind the Board has continued to sponsor a broad educational program.

Some of the activities of the educational program are summarized as follows: The biennial report of the preceding period has been distributed widely. Notices of the monthly meetings of the Board have been given to the press. Special articles relating to the program have been written for "Public Welfare News", "Public Health Bulletin", "Tar Heel Nurse," and the "Health Council Bulletin."

Letters of interpretation have been sent to county health officers and nurses. Copies of these letters went to field representatives of the State Board of Public Welfare, superintendents of public welfare, and to health educators. The Eugenics Board was included as one of the governmental state-wide resources in the "Directory of Mental Health Resources in North Carolina" published by the North Carolina Mental Hygiene Society in 1953.

The Executive Secretary has visited the state hospitals for the mentally ill, the training school for mentally defectives, the training schools for juvenile delinquents, and the school for the deaf.

Twenty county public welfare departments have been visited. In some instances discussions were held jointly with the welfare and health staffs and the staffs of the voluntary agencies during these visits. Regular discussions have been held with the field representatives of the State Board of Public Welfare. The Executive Secretary has participated on the programs of the

Administrative Conference of superintendents of public welfare, Southeastern Health Workers Conference, public health nurses' Supervisors Conference, the health educators' meetings, and the State Commission for the Blind.

STATISTICAL INTERPRETATION

Activities under the eugenical sterilization law from its beginning are shown in Table 2. Although there have been fluctuations from one biennium to the next, a steady growth in these activities has taken place over the years. For example, the 626 operations performed during the last biennium represented an increase of 133 per cent over the 269 operations performed during the comparable period ten years earlier.

Slightly over one-half of the operations performed during the biennium resulted from petitions which were non-institutional; that is, they originated in county departments of public welfare. The remaining 48 per cent resulted from petitions originating in State institutions.

The State institutional operations were reported from each of the four State hospitals for the mentally ill and from the training school for the mentally defective. A policy established whereby the superintendents of public welfare accept the responsibility for entering petitions for children in the State training schools for juvenile delinquents, found to be in need of sterilization, accounts for no operations reported for these schools. A similar policy holds true for children in the State School for the Deaf. Petitions for operations for sterilization that may have been submitted for persons in the State Prison have originated in the department of public welfare of the county of residence.

Operations were performed for 298 institutional patients and 328 non-institutional persons. The 298 institutional operations represent a decrease from the 471 operations performed during the preceding biennial period. The number is somewhat higher, however, than the 225 operations performed during the 1948-50 biennium.

There were 328 non-institutional operations during the biennium, which was an increase of 45 per cent over the 226 non-institutional operations performed during the previous biennium. Petitions for these operations originated in 89 of the 100 county

departments of public welfare in the State, the highest number for any biennium in the history of the program.

Table 10A shows the conditions which warranted operations for sterilization; of the 626 persons involved, 61 per cent were feeble-minded, 36 per cent were mentally ill, and 3 per cent were epileptic.

Over two-thirds of the persons sterilized were white, while almost one-third were Negro. However, the number of white persons dropped from 521 in the previous biennium to 423 in this biennium, while the number of Negroes increased from 171 to 202 in the same period. One Indian was reported as compared to two in the previous biennium.

Females continue to form the great majority of persons undergoing eugenical sterilization. Since men are just as likely as women to need the operation, there should be approximately the same number for each sex. Further interpretation is needed to convince men as to the value of the operation and that the operation has no other effect than the prevention of parenthood.

The simple operation required for sterilization is often mistaken for asexualization which is a much more drastic operation. The Eugenics Board orders asexualization only in rare instances, and no such operations were authorized during the biennium.

An analysis of Tables 7 and 7A shows that operations on older persons have increased more rapidly over the years than those performed for adolescents. Prior to July 1952, 21.3 per cent of the persons sterilized were 30 years or over, while during the latest biennium 29.4 per cent were 30 or older; at the same time persons under 20 declined from 42.6 per cent to 30.7 per cent of the total. The largest number of operations continue to be for persons in their twenties; almost 40 per cent of the persons sterilized during the biennium were 20 to 29 years of age.

Single persons continue to constitute about three-fifths of all persons having sterilization operations. During the last biennium 62.8 per cent of the total were single, 30.8 per cent were married, and 6.4 per cent were widowed, separated, or divorced.

Persons sterilized during the biennium were split almost evenly between those who were parents and those who were not. While 311 had no children, 315 were the parents of a total of 988 chil-

dren, or an average of 3.1 children each. This fact demonstrates the importance of early referrals to the Eugenics Board if the program is to be most effective.

As indicated by Table 15, 55 per cent of the operations were performed within one month of authorization and 75 per cent within two months. Only 7.5 per cent of the operations authorized were not performed during the biennium. These data indicate that prompt attention is given to the order of the Eugenics Board in the majority of cases.

Thirty hearing cases were held before the Board during this biennium, as provided by the Eugenics Law. Written consents for the operations were filed by the patients and/or the next of kin in the remaining 620 cases authorized.
